SCANVAS

Where Children's Creativity Comes Alive

A creative learning platform that transforms children's drawings into interactive digital experiences.

For children aged 3–10

Creativity Often Stops at the Paper

Children love drawing and coloring, but once the paper is finished, the learning moment often ends. Many screen-based activities are designed around watching and swiping rather than creating.

On paper

Creative and hands-on, but it ends when the page is done.

Create → Finished → Stop

On screens

Engaging, but children mostly watch instead of make.

Watch → Swipe → Watch

What if children's own creations became the starting point of learning?

Learning Should Start With Creating

Scanvas is built around a simple idea: children should use digital technology to create, explore, and discover, not only consume.

Create first
Start with the child's own imagination.

Make it personal
Their own artwork becomes the experience.

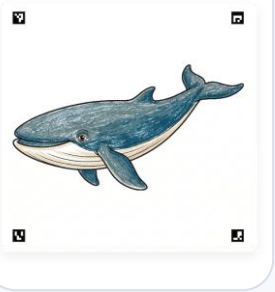

Explore through interaction
Movement, sound, stories, and facts extend the activity.

Keep access simple
Open it in a browser, with no app installation required.

From Paper to Interactive Learning

Children color a physical sheet, scan it through the website, and watch their own artwork become an animated character with sound, motion, and educational content.

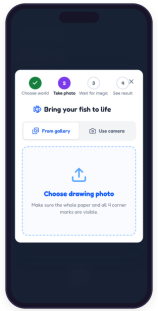

1

Color

Kids color a Scanvas paper sheet

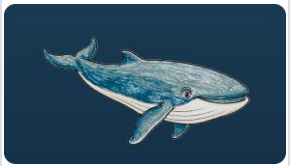

2

Scan

Snap or upload a photo in the browser

3

Come Alive

The artwork comes alive in seconds

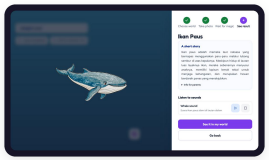

4

Explore

It swims inside a living world

5

Learn

A short story, sounds, and facts

LIVE TODAY · scanvas.id

Already Live.
No App Required.

Physical → Digital
Paper coloring + photo/upload processing

Interactive worlds
Ocean & Vehicle worlds

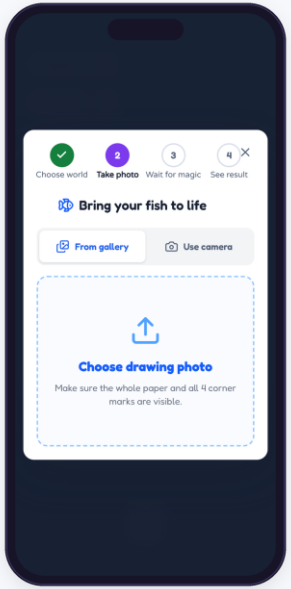

Personalized animation
The child's own artwork comes alive

Learning layer
Object sounds + short stories and facts

Digital trial
Try the experience before buying paper

Landing page

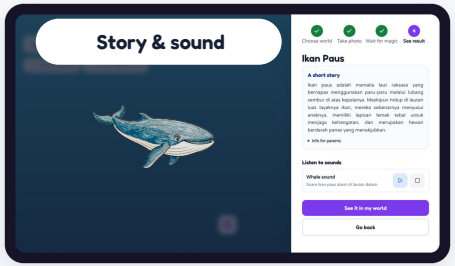

Scan / upload

Alive in the world

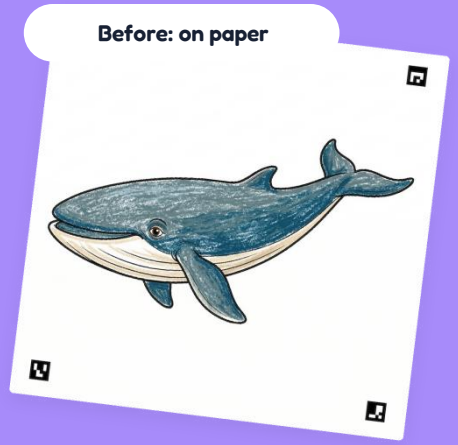

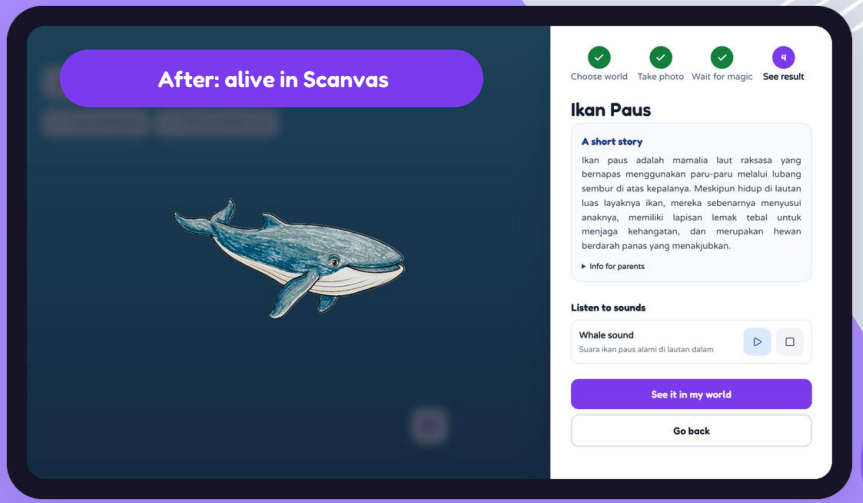

Their Creation. Their Character.

Unlike generic videos or static worksheets, Scanvas makes the child's own colored artwork the center of the digital experience.

Before: on paper

Movement

Sound

Learning Facts

One Engine, Many Learning Experiences

1 Physical-Digital Bridge

Children start with real paper and their own hands.

2 Personalized Output

The scanned artwork, not a stock character, enters the experience.

3 Low-Friction Access

Browser-based, with no mandatory app installation.

4 Reusable Learning Engine

The same processing and interactive-world system can support animals, vehicles, nature, creative classes, and future themes.

From Magic Moment to Learning Platform

Today, Scanvas uses the child's creation to trigger curiosity and discovery. Next, we are building structured learning activities around that engagement.

CURRENT · LIVE

Color → Scan → Alive

Today's magical coloring experience.

NEXT

Create → Explore → Story → Quiz

An interactive learning layer with stories, guided questions, and simple quizzes.

FUTURE

Learn → Practice → Create → Bring It Alive

Digital drawing and coloring classes: learn step-by-step, practice digitally, and bring the creation into Scanvas worlds.

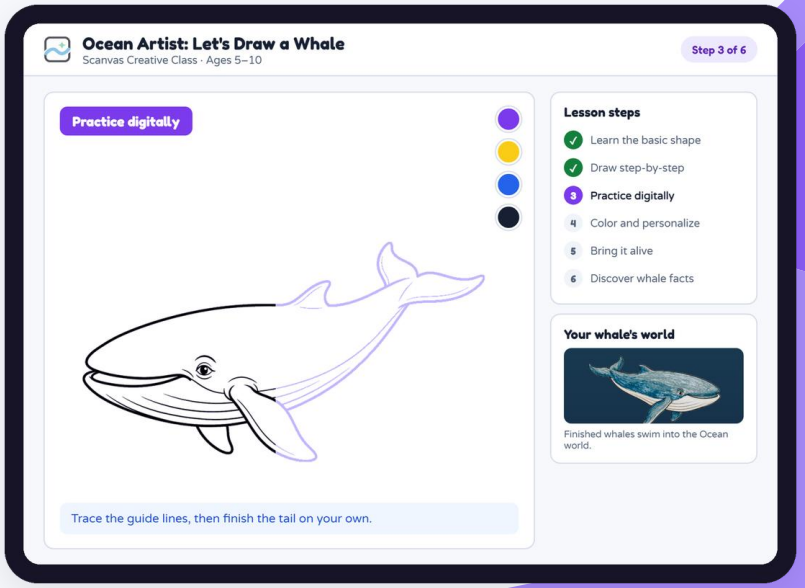

FUTURE ROADMAP · CONCEPT

Learn by Creating

Guided drawing classes that end inside a Scanvas world.

Example lesson **Ocean Artist: Let's Draw a Whale**

1. Learn the basic shape
2. Draw step-by-step
3. Practice digitally
4. Color and personalize
5. Bring it alive
6. Discover whale sounds, habitat, and facts

Core loop

Learn → Practice → Create → Experience → Discover

One Platform, Multiple Paths to Scale

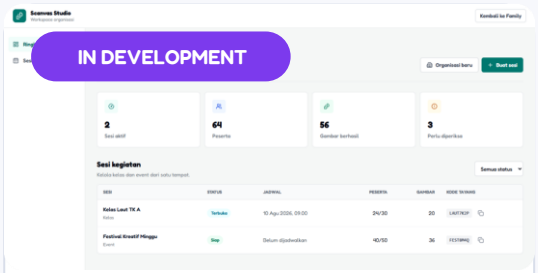

B2C

Families

Physical creative packs combining coloring sheets with the Scanvas digital experience.

Revenue model
Per-pack purchase

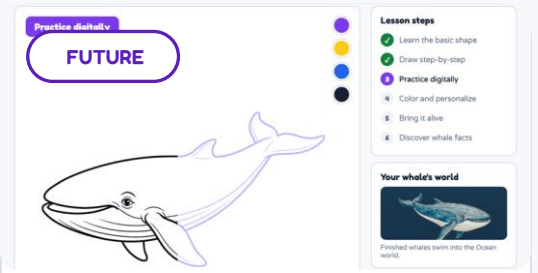

B2B

Schools & Events

Scanvas Studio for organized sessions, participant management, bulk processing, and shared experiences.

Revenue model under validation
Per session / per participant / usage-based

B2C + B2B

Digital Learning

Creative classes, learning worlds, content packs, and additional learning modules.

Potential model
Subscriptions and content add-ons

Early Validation → Scalable Learning Worlds

Early validation

✓ Live product · 2 worlds · scan-to-animation working

30	1	5
pilot participants	real-world pilot (TPA)	improvements from feedback

Feedback already changed the product

Shipped	Larger world for more creations
Shipped	Digital trial before purchase
In progress	Bulk drawing uploads
In progress	Learning space after play (Next stage)
In progress	More worlds, e.g. a land version

1

PHASE 1

Validate the Magic

Improve scan reliability; grow from 1 TPA pilot to more families and schools.

2

PHASE 2

Build Learning

Stories, quizzes, guided creative lessons, teacher and session tools.

3

PHASE 3

Scale Platform

Content library, Scanvas Studio, school partnerships, new learning worlds.
